The Wheat Problem

What to do about wheat is the greatest problem facing the Western Canadian farmer, not only for the immediate present, but for the long range future. Should he grow more, or should he raise wheat or other crops and then forget about wheat and turn his attention to other crops and other activities?

It is safe to say that this problem causes more sleepless nights on the Western Canadian prairies than anything else. It is probably not far from the truth to say that the question is uppermost in the mind of the average farmer. The greater part of his waking hour, and that during the night, it perturbs his slumbers.

One of the solutions of the problem can get plenty of data which has a bearing on the subject and a plethora of advice without going far afield for it, but unfortunately for him and for his peace of mind so many complications are involved in the problem and so many, so diverse and contradictory are the replies that the greater his research, the greater must be his confusion and the further he is away from a conclusive answer.

To solve the problem with even a remote degree of assurance, the investigator must not only be in possession of an immense amount of current available information but he must also be something of a prophet. He must be able to pour into the crystal of the future and divine what is ahead. As there are no infallible methods for determining the various factors of production and marketing he must make his guess as best he can and shape his course accordingly.

If he guesses right, he successfully runs the gamut of early and late frosts, grasshoppers, wire worms, cutworms, chafers and other noxious insects, windstorms and hail, and he will have a crop of wheat. If he is faced with the possibility that it may be a drug on the market and that the reward of his labor may be little better than zero.

Added to this and many other unsolved uncertainties it practically guarantees that the wheat farmer is in a position where he is handicapped as a new threat to the existence of cereal farming as it is practiced in the prairie provinces. The farmer is in a position where he is handicapped as a new threat to the existence of cereal farming as it is practiced in the prairie provinces.

To quote a Magazine Digest article of an article appearing in the Magazine Digest of London, the inventor claims that under their plan which they call "cotton culture," one acre of grain space is equal to 1,760 acres of grain land; aspenwood of seed will grow 200 bushels/acre of green fodder; one acre of fodder can be produced per acre of grain space; a farmer feeding intensively cultivated corn instead of hay and grain for his livestock will save \$2.50 on every pig bought to bacon weight, or on every bullock, and from 15 to 20 per cent, on every horse, because they will be eating young, fresh pig instead of old or dried grain which has been weakened.

The intake of the cabinet contains rows of trays, each one with corn in a different stage of growth. To-day's tray hold seed. Yesterday's shows the white shoots. The shoots are larger and larger up to the fourth day when the fodder is full grown and ready to be taken out and eaten.

There is no soil in the top of the cabinet is a tank full of water containing a small proportion of a chemical. The chemicals are the seeds which the soil contains. Enough solution of seed will last a month costs \$3.75. The water is taken out of the cabinet and the seeds are planted in it. After 24 hours a tray is turned on and the tank drops "tray" on to the top layer of trays. By the tenth day of growth can be lifted out of the tray like a green mat. The animals eat every scrap of it and the tray is left perfectly clean. There is no earth or dirt of any kind in the whole process.

"Animals fed on this 'cotton culture' grow much faster than those fed on grain. It is reported that already efforts are being made to establish an agency and import some of these 'factory-farms' in Western Canada.

Man With Cold Brain

Can the Two Entirely Different Things At One

There is a man in Sydney, N.S.W., who can do two entirely different things at once, and he does them well. He is Sirirling Wilkinson, known to his friends as the man with the "cold brain."

Among other accomplishments, he can write different, sound and sentences simultaneously with both hands. He can write the same word backwards. He can also do two separate degrees at the same time. As a housekeeper he is particularly noted as he can make simultaneous entries—the figures and the words and the items with the other.

Wilkinson says that he was born with it. As a child he found that he was writing backwards with his left hand—to the discomfort of his teachers, who were given to writing. Some specialists who examined him, decided that it was a disease of the brain. To induce correct writing with the right hand, they started with his left hand on his body.

When he entered college, he put out only one word at a time. After a while, he committed some misadventures and was given a good writing. By using both hands at once he completed the task in half the time taken by his classmates. He was astonished when he was told that he was doing it. He was told that he was doing it. He was told that he was doing it.

He was told that he was doing it. He was told that he was doing it. He was told that he was doing it. He was told that he was doing it. He was told that he was doing it.

Long Patrol Ends

Ship That Guides Navigation Through Northern Channels, Completes Work for Season

The N. B. McLean, sub-zero-tolerance tug which guides navigation through channels leading to Canada's most northerly airport of Churchill, shipped quickly into harbor at Quebec recently, completing her seasonal patrol of the northern seas.

For almost three and a half months she plowed the Hudson Strait, grinding 150,000 tons through the narrows, and to the Atlantic ports. During that time she saved one ship, the Iceberg from the river, disabled in a fog, washed aboard. The storm, last September, swept for three days and the McLean stood at hours before attempting to rescue the crew and later place them aboard the steamship Flyer.

From remote points in the north the McLean brought back eight wire-telegraph operators, stationed for a year at their lonely outposts.

She also brought back Gabriel Rehat, 23-year-old boilermaker from the Charles J. D., stricken by appendicitis as the French freighter made her way up the straits. The French crew was brought aboard the McLean, and Dr. Fernand Lacombe performed an emergency operation in his cabin.

The patient was reported recovered and was expected to return to his native France.

At heavy fog in the straits the McLean was put in to provide medical treatment for more than a dozen sailors, stricken by influenza. Four of the group died before the vessel arrived, but Dr. Lacombe reported recovery of the others after medical treatment.

It Sp-p-o-d-s

Its scientific name is *Sp-p-o-d-s*, really spelled through nose and up throat—

You can get the fudge in Vetro-nol Sp-p-o-d-s through the trouble you are in your nose and upper throat. Vetro-nol is specially designed to stimulate natural drainage of the nose. Used in the late, Vetro-nol helps prevent colds, sinusitis, and other conditions from developing... and to three of head colds in the early stage.

Buckingham Fine Cut

MILD COOL SMOOTH

WORLD HAPPENINGS BRIEFLY TOLD

Death rate from tuberculosis has been cut in two in Ontario, N.W. Dr. J. A. Paulson, Ontario minister of health, says a Peterborough service center has been on the front of police automobile has been invented by a famous English automobile racing driver to add in the capture of criminals fleeing in cars.

A machine that takes 3,000 eggs an hour for quail and grades them by weight was on show recently at the "Green" Exhibition at Royal Agricultural Hall at London.

Thomas Bryson, 93, the oldest foreign missionary in China, died at Tianjin recently. He went to China from Edinburgh in 1868 in a tea clipper which required 135 days to make the voyage.

Work reached Tianjin to the effect that Dr. J. A. Paulson, who has been in time in his career practiced medicine there and in Maville, Alta, has been appointed medical officer at the Gospel, Ont., reformatory.

Officials of the Northern Alberta Wheat Board estimated 3,000,000 bushels of grain, mostly wheat and barley, had been marketed already this season by farmers in northern Alberta.

Last 145 years ago a man who couldn't sleep nights sent \$5 to the publisher of a treasury of 3,000,000 many remarkable children have followed his example, until today the treasury is a money-making machine all credit to the people's conscience.

Application of the Central Alberta Dairy Board limited, to the many Alberta Creameries, Limited, for a license to freight milk in motor trucks to Carleton Place, Ont., and Red Deer, Alta., to Vancouver was refused by the judgment of the Royal Dairy Commissioners.

New Garden Methods

Scientific Method That Vegetables Can Be Grown in Chemical

Trunks
A world of wonders in which families will raise their own vegetables from chemical tanks instead of from the soil, is being developed at the present moment, it was revealed by Arthur C. Pillsbury, lecturer.

Pillsbury, also a naturalist, inventor, and author of a book on soil and soil-less tank experiments had indicated a tenfold increase in vegetable production.

"Although the idea is not new, recent experiments have led scientists to believe that vegetables can be grown commercially in shallow trays of special glass water, in which all the necessary soil requirements have been missed," Pillsbury said.

"In one instance shallow-tank-grown crops produced between 10 and 20 times as much as the crops sown in the soil, and the acre compared with a United States average of 14 bushels.

Scientist Has New Theory

Believes Rain Will Some Day Fall All Life On Earth

A learned man or scientist who has been known one day not to death, ending all life on the planet.

Dr. Henry Norris Russell, director of the Lick Observatory, said he was sure that the sun would not arrive for a billion years or more.

Bird Was Passenger

Homing Bird Killed When Goss Is Shot in B.C.

A hunter's shot that killed a hummingbird was also a tragedy for a bird, also killed a passenger—a hummingbird—on a flight to B.C. in the birth of feathers of the larger bird.

Ornithologists say it is a common practice among hunters to shoot away in this fashion and frequently the bird is brought down and the meat is eaten, and the bird is not even given a chance to fly.

Between \$1,000,000,000 and \$8,000,000,000 is estimated annually in the United States is spent on the purchase of automobiles, many cars, etc.

FOR COUGHS
COLD BRONCHITIS
Croup
Whooping Cough
Matthies
Mullein
Syrup

Crushing into the solvent and tea, and the solvent is then added to the Rose Air Pure pill managed to make a perfect liquid medicine which is the same as the original, putting out the fire in a few minutes.

Has Variety Of Uses

Chemists Have Found Many Ways To Use Corn

Every farmer and housewife knows the uses to which corn—corn, the cob of it or it may be put. But for the feeding of livestock and humans it is a valuable product. Corn, according to the Dominion Bureau of Statistics, is the most important crop in Canada, with 25,000,000 bushels a year and imports 8,000,000 bushels from the United States.

In the Middle-West United States the production runs to hundreds of millions of bushels a year.

If You Have a Child
ASK YOUR DOCTOR THIS

Don't give your child an ordinary remedy unless taking your doctor's advice.

When it comes to the widely used children's remedy—"milk of magnesia"—the standard of the world is established. For over half a century many parents have used PHILLIPS' Milk of Magnesia for their children.

Keep this in mind, and say "PHILLIPS' MILK OF MAGNESIA."

Get the form you need to ask your doctor to give your child PHILLIPS' Milk of Magnesia.
